usdhs natl toxicology program

i do not want any of the tests mentioned to be used for evaluating alternative toxicological methods.

i do not want any test used that uses any bovines.

i do not want any test used that uses rabbits or chickens.

if any of these tests use animal subjects, they are very outdated, having first been used in 1500 a.d. these tests constitute animal abuse and provide no worth to anyone. remember, thalidomide tested just fine on animals and took the limbs off people. we cannot have these erroneous tests used anymore.

for human eye, irritancy, the important thing is to test human cells.
